Team 27

Our Team “Friday” & Project “On The Beat”

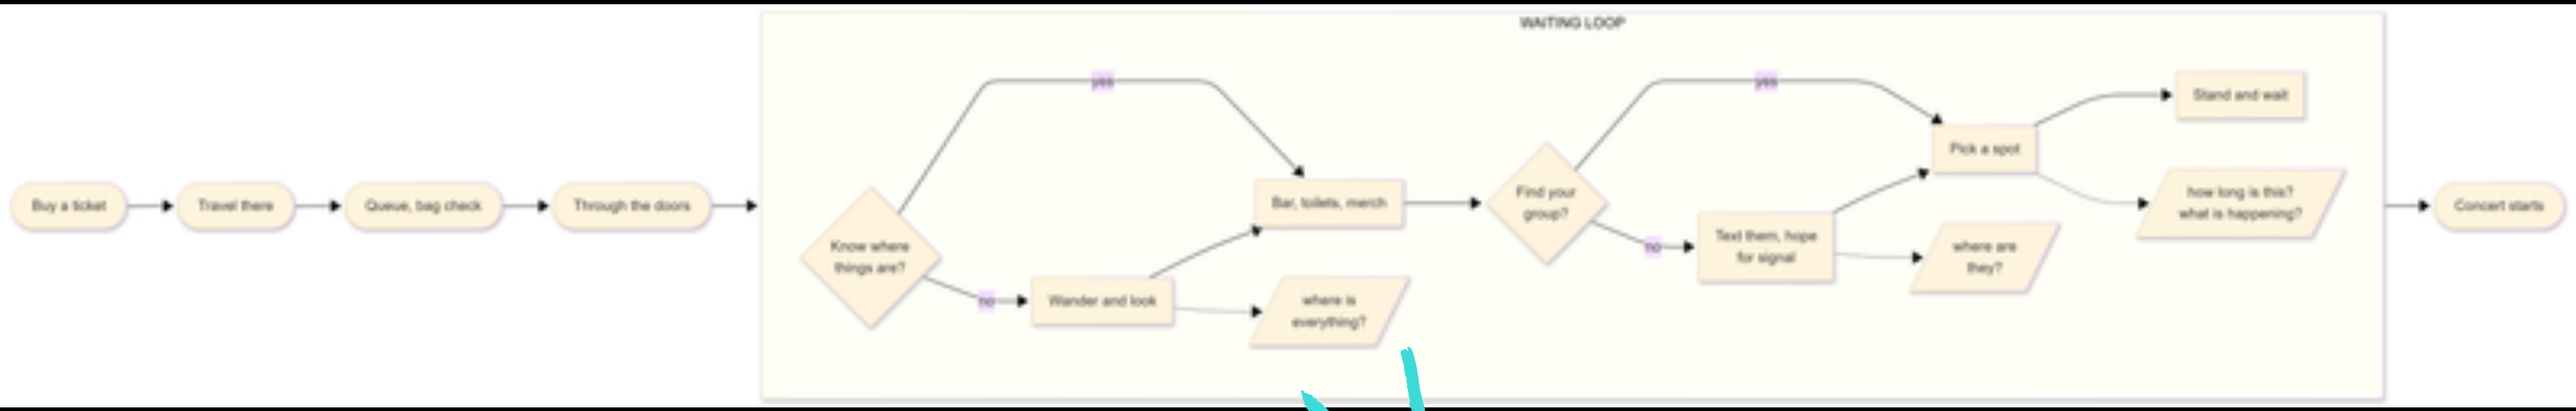

Combined Strengths: As we are all interaction design students, we have experience with design thinking and an iterative process based on users' values and context. This enables us to view the project with a service design approach instead of merely an application.

Prototype & Build	UX Design/ Communicator	Ideation & Documentation	Data & UI	Team Lead
Ziming Dong	**Marvin Fox**	**Dumacili Yang**	**Dawn Kowalczyk**	**Junaid Khan**
Builds the working prototype, so we can test the concept with tpeople in a real venue rather than as a click-through.	Comes from project management and UX research, stretching into design and usability testing.	Keeps documents and slides organised and polished, and produces options whenever we stall.	Handles data analysis and visualisation, and turns what we find into interface decisions.	Runs design and brainstorming, keeps the schedule and the decisions moving

Domain & Problem Space

Time Before The Concert

"Through automating the music choice the 'disappearing computer' in these examples removes the very process of choice. Yet this process can be an important context for social value and experience."
--- O'Hara et al., 2004, p. 145

(What the Venue Offers Instead)

Signs, announcements and staff directions. Functional but passive, rather than timely, social, contextual and engaging.

Unsure where to go, how long they will wait, or how to access support.

Concert audiences often spend a substantial period of time **waiting, navigating unfamiliar venue spaces, locating friends**, and trying to **understand what is happening** before a performance begins.

O'Hara et al., 2004, p. 145

Design opportunity

Enhancing the Transition

Consider the pre-performance period as part of the concert experience, rather than simply a period of waiting.

RESEARCH

Audience journey extends beyond the performance.
Benford et al., 2018

INTERVIEWS (n=6)

Recurring themes included social connection, navigation, group coordination, waiting and safety, highlighting how audiences rely on others while navigating, waiting and building anticipation before the performance.

Intended Audiance

Live Concert Audiences

People experiencing the transition between entering a music venue and the performance beginning.

CONNECTING WITH PEOPLE
Finding and coordinating with friends in a crowded venue.

Priority
staying connected and sharing the experience.

NAVIGATING THE VENUE
Moving through an unfamiliar venue to find facilities, entrances or gathering areas.

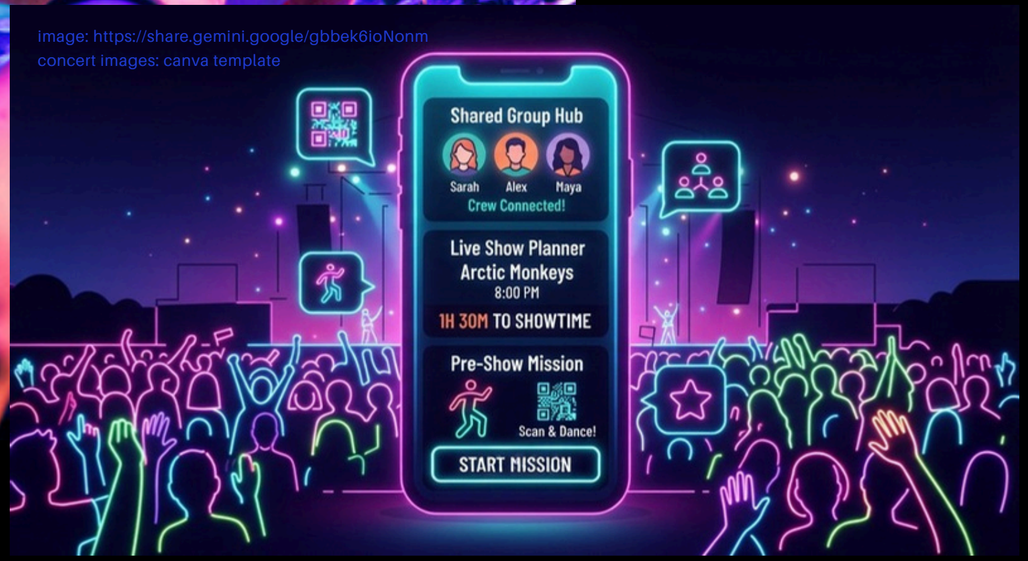

Skill
using mobile information and navigation.

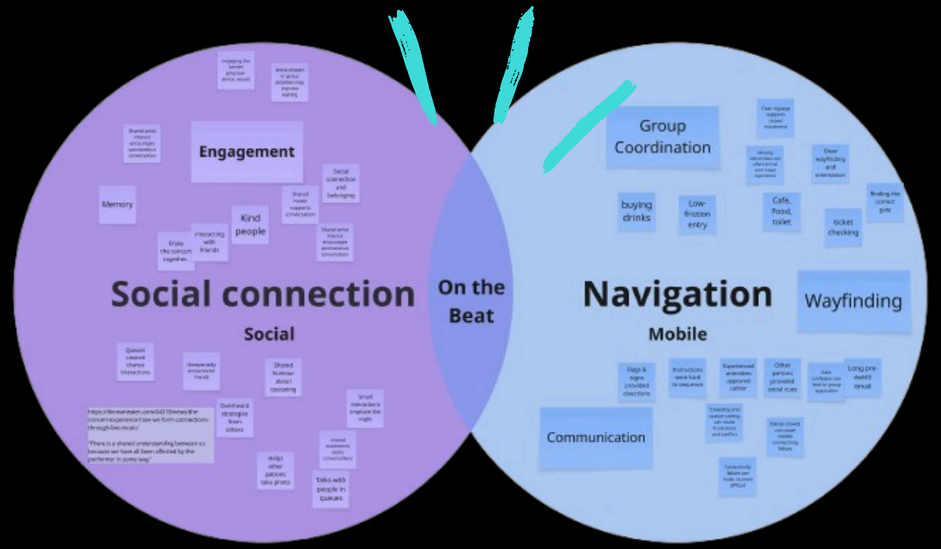

EXPERIENCING THE WAIT
Waiting for the performance while anticipating what comes next.

Value:
enjoying the build-up to the shared live experience.

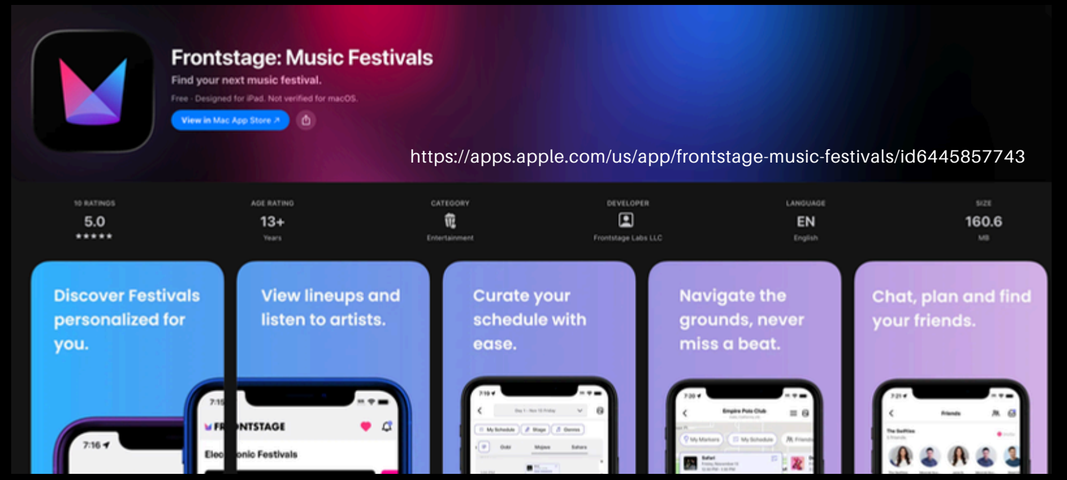

“ON THE BEAT”
Concept

Prior attempts

- Mainly personalisation, planning, friends
- 1 AR experience: Coldplay-Music of the Spheres app

Plan the night. Stay with your people. Never miss the beat.

On the Beat is a **shared, context-aware pre-show planner (group planning, wayfinding)** that helps concertgoers coordinate everything they want to do before the performance. **Artist-related group activities (gamification)** are offered to make the experience memorable and engaging.

Iterative cycles towards a tested proof of concept

How we'll manage our work

1

Research

1:1 Interviews & Obersvations

2

Synthesise

Map + Reframe + Prioritise

3

Design Sprints

Ideate + Decide + Sketch + Storyboard

4

Prototype

User Flows + Build testable versions

5

Usability Testing

Observe + Learn + Refine

6

Iterate

Evidence informs the next cycle

7

Launch

Tradeshow ready version
